

Produce(ing) More Value for You

Introducing a new and innovative way to display produce that delivers a fresh perspective for both merchandising operations and shopability.

Expanded Sightlines

Increased Capacity

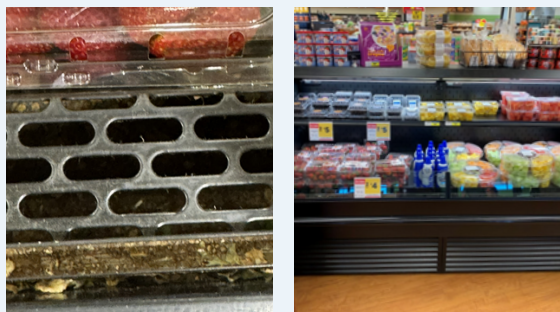

Reduced Maintenance

Providing a Better Solution

More than any other merchandisers, produce displays are exposed to significantly more debris and foreign material leaving unsightly and performance robbing material in the air return.

Other Models

Current merchandising solutions force operators to completely empty the produce and remove large and heavy deck pans to attain access for cleaning.

Structural Concepts®

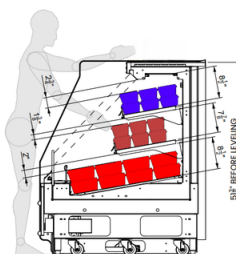

The Structural Concepts air return reduces cleaning from hours to minutes with a design that doesn't require tools to remove, allowing quick access to the areas needing cleaning.

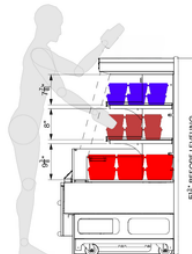

Refrigerated and ambient end caps match perfectly to straight case profiles to arrange large islands on site, creating visibility throughout the entire department.

ANGLED SHELVEING

FLAT SHELVEING

Increased Capacity

The angled shelving system and recessed deck deliver greater merchandising capacity than traditional models while creating an easier load-and-stock operation.

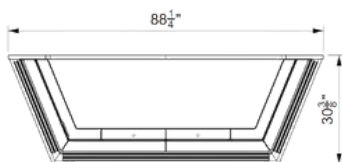

Tool-Free Flexibility

Quickly convert to a traditional flat deck without tools for seamless merchandising transitions.

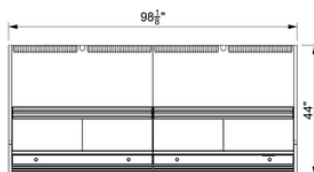

Available Models:

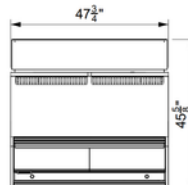

P7E53R

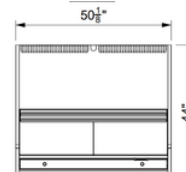

PD852R

NM4852RSSA

PD452R

Products are equipped with two (2) setpoints. Critical (average temperature below 41 degrees Fahrenheit) and Non-Critical for cold sensitive fruits (average temperature 45 Fahrenheit)
